Executive Summary

From July 1, 2010 to July 1, 2012, Product Care Association's British Columbia LightRecycle program included residential-use fluorescent lamps only. On July 1, 2012, the program expanded to include "all electronic or electrical lighting equipment, parts and bulbs, including lamps, fixtures and flashlights..." used in residential and non-residential applications, pursuant to the requirements of Recycling Regulation B.C. Reg. 449/2004 (the "Regulation"). This report covers the period of January – December 2012.

Products within plan	<p>Lamps, lighting fixtures and ballasts used in residential and non-residential applications are covered under the program plan.</p> <p>These products are broken down into thirteen categories:</p> <ol style="list-style-type: none">1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet3. Fluorescent/Induction/UV Tubes measuring > 4 feet4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps5. Light Emitting Diodes (LED)6. High Intensity Discharge (HID) and Other7. Incandescent / Halogen8. Miniature Bulb Package9. Designated Small Fixtures / Decorative Light Strings10. Fixture Category A11. Fixture Category B12. Large Outdoor Fixtures13. Ballasts/Transformers (not integrated into lamps or fixtures) <p>See list of products covered under the program at www.lightrecycle.ca/consumers/accepted-products</p>
Program website	The BC LightRecycle website is www.lightrecycle.ca

Recycling Regulation Reference	Topic	Summary
Part 2, section 8(2)(a)	Public Education Materials and Strategies	<ul style="list-style-type: none"> • Program Website • Point of Sale and Point of Return Materials • Print and Online Advertising • Notification Letters to targeted stakeholder groups • Partnerships with Key Industry Stakeholders • RCBC Hotline & Recyclepedia
Part 2, section 8(2)(b)	Collection System and Facilities	<p>Contracted with:</p> <ul style="list-style-type: none"> • Residential Lamps collection sites • Residential Fixtures collection sites • Commercial Lamps collection sites • Commercial Fixtures / Non-PCB Ballasts collection sites <p>Additional collection services included:</p> <ul style="list-style-type: none"> • Direct pickup service for PCB ballast • Direct pick-up service for Large Volume Generators of lamps and pre-crushed lamps • Unadvertised collection sites and limited number of collection events
Part 2, section 8(2)(c)	Product Environmental Impact Reduction, Reusability and Recyclability	Producers are working to reduce the environmental impact of lighting products through innovative product design and technology. Life-cycle management is also playing an important role in reducing the environmental impact of lighting products.
Part 2, section 8(2)(d)	Pollution Prevention Hierarchy and Product / Component Management	<ul style="list-style-type: none"> • Lamps broken down into component parts (glass, metal, mercury, phosphor powder) and recovered/recycled: mercury recovered, recycled and reused in manufacturing processes; metal and glass is recycled and the phosphor powder is reused in manufacturing processes • Residential fixtures broken down into component parts for recycling • Commercial fixtures and non-PCB ballasts are processed and recycled through scrap metal waste streams • PBC ballasts managed as hazardous waste
Part 2, section 8(2)(e)	Product Sold and Collected and Recovery Rate	<ul style="list-style-type: none"> • Program members reported selling 11,403,081 units of program products • In 2012, the program collected an estimated: <ul style="list-style-type: none"> - 1,164,966 units of lamps - 67 tonnes of residential volume residential fixtures - 1,969 kilograms of PCB ballasts
Part 2, section 8(2)(e.1)		See Appendix B for estimated collection volumes by Regional Districts
Part 2, section 8(2)(f)	Summary of Revenues and Expenses	<ul style="list-style-type: none"> • The program is managed and funded by members based on fees applied to the sale of new program products in British Columbia • An independent financial audit for the reporting period is appended to the report (Appendix C)

Comparison of Key Performance Targets		
Part 2 section 8(2)(g); See Plan Performance for details (Section 9)		
Priority Stewardship Plan Targets	Performance	Strategies for Improvement
150 Residential Volume lamps Collection Sites	201	N/A
60 Residential Volume Fixtures Collection Sites	112	N/A
Capture Rate Targets – Fluorescent Tubes (10-12%)	41%	N/A
Capture Rate Targets – CFLs (19-24%)	48%	N/A

2. Program Outline

Product Care Association (PCA) is a federally incorporated, not for profit product stewardship association formed in response to stewardship regulations and is governed by a multi sector industry board of directors.

In 2012, the LightRecycle program operated in accordance with Product Care Association’s *BC Lamps and Lighting Equipment Stewardship Plan* dated March 9, 2012, approved by the BC Ministry of Environment on April 23, 2012, pursuant to the requirements of the Recycling Regulation B.C. Reg. 449/2004 (the “Regulation”).

Between January 1, 2010, and June 30, 2012, the LightRecycle program captured residential-use fluorescent lamps only. In response to the Regulation, on July 1, 2012, PCA launched the expanded BC LightRecycle program – a program designed to collect and manage end-of-life lamps and lighting equipment products for all sectors (residential, institutional, commercial and industrial sectors).

The program implemented a phased-in approach, expanding on July 1 to capture residential-use lamps (all technologies) and residential-use fixtures only. On October 1, 2012, the program expanded further to capture residential, institutional, commercial and industrial end-of-life lamps, ballasts and fixtures (Table 1).

Table 1 – BC LightRecycle Program 2012 Timeline

January 1 – June 30	Residential-use fluorescent lamps (CFLs and fluorescent tubes)
July 1 – September 30	Residential-use lamps (all technologies) and residential-use fixtures
October 1 – December 31	Residential, institutional, commercial and industrial end-of-life lamps, ballasts and fixtures

3. Public Education Materials and Strategies

The following is a summary of public education materials and strategies used during 2012 to raise end-user awareness of the BC LightRecycle program.

- **Program Website** – The LightRecycle website, www.lightrecycle.ca, provides detailed information on the program including depot locations, accepted products, promotional materials and eco-fees. The LightRecycle website received approximately 83,733 “page views” between January 1 and December 31, 2012.
- **Point of Sale Materials** – Over 129,400 point of sale “brochures” (see Appendix A) were distributed to retailers, regional districts, municipalities, RCBC and other stakeholders during the year 2012, for the program expansion. These materials are available for reorder by web-form or can be downloaded and printed directly from the program website.
- **Website Linkages** – PCA coordinated with other parties, including regional districts, BC Hydro and Fortis BC to provide links to the LightRecycle website. The LightRecycle website is part of Product Care’s main website
- **RCBC Recycling Hotline** – The program participated in the Recycling Council of BC’s (RCBC) hotline service by which consumers can contact RCBC operators and obtain information on how to recycle various products. From January 1 to December 31, 2012, RCBC received 3,711 calls regarding recycling lighting products.
- **RCBC Recyclepedia** – The program is featured on RCBC’s Recyclepedia, an online recycling encyclopedia for British Columbians. From January 1 to December 31, there were 4,744 web searches for recycling lighting products on RCBC’s website. (*Note: only the residential lighting products were listed on the Recyclepedia in 2012*) The program’s collection sites are also included in the search engine <http://rcbc.bc.ca/recyclepedia.ca>.
- **Print Advertising** – An ad published in municipal calendars reaching several communities in BC, including: Mission, Chilliwack, Invermere, Kootenay Boundary Penticton, and more. A print ad announcing the expansion of the LightRecycle program appeared in *BCBusiness* magazine, *The Vancouver Sun* and several local newspapers in the Lower Mainland and on Vancouver Island
- **Web Advertising (Social Media)** – The program was also promoted online in the fall of 2012 through *Vancouver Sun* banner ads. Facebook advertising (see Appendix A) ran from November, 2011 to February, 2012, receiving 3,527,994 impressions and 264 “click-throughs” to www.lightrecycle.ca
- **Targeted Mailout** – On April 13, 2012, PCA ran a targeted mailout to potential large volume generators of program products, providing them with program information such as details on the upcoming launch of BC LightRecycle program and collection systems and services that would be available throughout the province. Notice that the program would be funded by recycling fees was also provided.
- **Local Government Partnerships** – The program continued collaborating with local governments by advertising in municipal garbage/recycling calendars, adding website links and distributing point of sale materials.
- **Public Utilities** – LightRecycle program information is featured on [BC Hydro’s website](http://www.bchydro.com). Program information is also available on [Fortis BC’s website](http://www.fortisbc.com), along with a link to LightRecycle depot finder.

4. Collection System and Facilities

The BC LightRecycle program provides a free and convenient collection system for all consumers of program products. PCA does not directly own or manage collection sites, but rather has contracts in place with facilities to operate as collection sites for the program. Contracted facilities include retailers, recycling organizations (both non-profit and for profit), local government recycling centres or transfer stations and other associations or businesses interested in participating in the program. PCA's BC residential-use fluorescent lamps program began in 2010. On July 1, 2012, with the expansion of the program, the collection system expanded to collect end-of-life residential-use lamps of all technologies, as well as residential-use fixtures. Full implementation of the program's collection system for institutional, commercial and industrial sources of end-of-life lamps, ballasts and fixtures began on October 1, 2012 (Table 2).

Table 2 –BC LightRecycle Program 2012 Accepted Products

January 1 – June 30	
Residential Sector Only	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps
July 1 – September 30	
Residential Sector Only	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps
	5. Light Emitting Diodes (LED)
	6. High Intensity Discharge (HID) and Other
	7. Incandescent / Halogen
	8. Miniature Bulb Package
	9. Designated Small Fixtures / Decorative Light Strings
	10. Fixture Category A
October 1 – December 31	
Residential, Institutional, Commercial and Industrial Sectors	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps
	5. Light Emitting Diodes (LED)
	6. High Intensity Discharge (HID) and Other
	7. Incandescent / Halogen
	8. Miniature Bulb Package
	9. Designated Small Fixtures / Decorative Light Strings
	10. Fixture Category A
	11. Fixture Category B
	12. Large Outdoor Fixtures
	13. Ballasts/Transformers (not integrated into lamps or fixtures)

Recognizing that different collection systems are needed depending on the type of use (residential or commercial), the type of product (lamps and fixtures) and the quantity involved, the program has established four different types of collection sites (Table 4).

In addition to collection sites, subject to the end-user meeting certain criteria such as minimum volumes, the program also offers free direct pick-up services to generators with:

- Large volumes of whole lamps
- Drums of pre-crushed lamps
- PCB ballasts

These pick-up services are generally targeted to commercial generators with large volumes of program products for recycling and are designed to ensure they can conveniently recycle their volume of products without charge. The program also participated in a limited number of collection events that were organized and operated by local governments (Table 3).

Table 3 – BC LightRecycle Program 2012 Collection Events

Location	Date
Sicamous	Apr 28, 2012
Pritchard	Apr 29, 2012
Ashcroft	May 5, 2012
Merritt	May 5, 2012
Golden	May 12, 2012
Mission	May 12, 2012
Langley	Oct 27, 2012
Chilliwack	Oct 13, 2012

In 2012, the BC LightRecycle program contracted with a net 380 different collection facilities across the province. BC LightRecycle collection site locations are advertised by type (Table 4). With many locations accepting multiple program product types (both residential lamps and residential fixtures, for example), the program advertised a total of 426 collection site locations in 2012 (Table 4). In addition to these collection site locations, the BC LightRecycle program had 23 unadvertised collection sites: 9 unadvertised commercial lamps collection sites and 14 unadvertised commercial lamps consolidator sites (see Table 5 for a list by regional district). For a full list of advertised and unadvertised collection site locations, please see Appendix B.

Table 4 – BC LightRecycle Product 2012 Collection Sites Breakdown

Advertised Collection Sites by Type	2012 Locations	2011 Locations
Advertised Residential Lamps Collection sites accepting residential volumes of lamps (up to 16 units)	201	197
Advertised Residential Fixtures Collection sites accepting residential volumes of fixtures	112	n/a
Advertised All Sector Lamps (Commercial) Collection sites accepting commercial volumes of lamps (more than 16 units)	66	n/a
Advertised Commercial Fixtures & Non-PCB Ballasts Collection sites accepting commercial volumes of fixtures & Non-PCB Ballasts	47	n/a
Subtotal Total	426	197
Unadvertised Commercial Lamps An unadvertised contracted collection site, typically collecting lamps as an unadvertised service for customers	9	n/a
Unadvertised Commercial Lamps Consolidators Unadvertised contracted collection site consolidating smaller volumes of commercial lamps into larger quantities, not qualified for Large Volume Generator pickup services.	14	n/a
Total	449	197

Note:

1. All advertised and unadvertised collection sites are contracted by the program
2. Some collection sites may provide more than one type of collection service and are reported separately as a collection site in each type of collection facility in the above table
3. In 2012, the BC LightRecycle program ended contracts with 27 locations.

Table 5 – BC LightRecycle Program 2012 Net Collection Site Breakdown by Regional District

Regional District	# of Collection Site Locations (Advertised and Unadvertised)
Alberni Clayoquot	5
Bulkley Nechako	6
Capital Regional District	40
Cariboo	9
Central Coast	1
Central Kootenay	9
Central Okanagan	12
Columbia Shuswap	8
Comox Strathcona	11
Cowichan Valley	11
East Kootenay	8
Fraser Fort George	4
Fraser Valley	25
Metro Vancouver (GVRD)	126
Kitimat Stikine	4
Kootenay Boundary	5
Mt. Waddington	5
Nanaimo Regional District	17
North Okanagan	9
Northern Rockies	4
Okanagan Similkameen	14
Peace River	7
Powell River Regional District	4
Skeena-Queen Charlotte	3
Squamish Lillooet	10
Sunshine Coast	7
Thompson Nicola	16
Total	380

Note: For those collection sites that provide collection services for more than one type in Table 4, for the purposes of Table 5, these sites are only counted as one collection site

5. Product Environmental Impact Reduction, Reusability and Recyclability

Producers are working to reduce the environmental impact of lighting products through innovative product design and technology. Life-cycle management is also playing an important role in reducing the environmental impact of lighting products.

Innovative product design, for example, has resulted in the development of smaller diameter fluorescent tubes now available on the marketplace. These products can provide the same or more light with about 50% less material resources by weight¹. The amount of mercury contained within fluorescent lights has also been decreasing. Through innovative technology, manufacturers have decreased the amount of mercury in fluorescent lamps by over 80% since 1990².

With respect to product life-cycle management, producers are focusing their attention on increasing product energy efficiency. This has resulted in a substantial increase in the lifespan of fluorescent lights in the last decade, reducing the environmental impact associated with these products.

6. Pollution Prevention Hierarchy and Product / Component Management

The BC LightRecycle program strives to manage collected materials as high on the pollution prevention hierarchy as possible. The program is designed to collect lamps, fixtures and ballasts from all sectors that are no longer working and/or cannot be reused.

Collected lamps are shipped to three separate processors where they are broken down into component parts (glass, metal, mercury, phosphor powder) and recovered/recycled. The mercury is recovered, recycled and reused in manufacturing processes. The metal and glass is recycled and the phosphor powder is reused in manufacturing processes.

Residential-use fixtures were collected and shipped to two independent processors to be broken down into their component parts for recovery/recycling. Commercial fixtures and non-PCB ballasts were collected and processed through the scrap metal recycling system. PCB ballasts are collected and managed as hazardous waste.

7. Product Sold and Collected and Recovery Rate

7.1 Products Sold

Program fee rates for expanded program products began on October 1, 2012. Members of Product Care's BC residential-use fluorescent lamps program reported on sales from January 1 to September 30,

¹ European Lamp Companies Federation. *Climate, Environment and Health*. Please refer to <http://www.elcfd.org>

² Personal Communication with Wayne Edwards, Electrical Equipment Manufacturers Association of Canada.

2012. The new fee rates and additional fee categories for all program members began on October 1, 2012 (Table 6).

Table 6 – Member Product Sales Reporting Timeline

January 1 – June 30	
Residential Sector Only	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps
October 1 – December 31	
Residential, Institutional, Commercial and Industrial Sectors	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps
	5. Light Emitting Diodes (LED)
	6. High Intensity Discharge (HID) and Other
	7. Incandescent / Halogen
	8. Miniature Bulb Package
	9. Designated Small Fixtures / Decorative Light Strings
	10. Fixture Category A
	11. Fixture Category B
	12. Large Outdoor Fixtures
	13. Ballasts/Transformers (not integrated into lamps or fixtures)

Table 7 shows the approximate the number of units sold into BC as reported to PCA by its members during 2012, based on the reporting timeline noted above.

Table 7 –Member Reports of units sold during 2012

Category	Units Sold
1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet	163,480
2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet	1,163,200
3. Fluorescent/Induction/UV Tubes measuring > 4 feet	210,676
4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps	3,741,583
5. Light Emitting Diodes (LED)	438,769
6. High Intensity Discharge (HID) and Other	100,867
7. Incandescent / Halogen	3,599,319
8. Miniature Bulb Package	193,469
9. Designated Small Fixtures / Decorative Light Strings	1,018,018
10. Fixture Category A	595,672
11. Fixture Category B	84,525
12. Large Outdoor Fixtures	4,988
13. Ballasts/Transformers (not integrated into lamps or fixtures)	88,515
Total	11,403,081

7.2 Absolute Collection Data

From January 1 – June 30, 2012, BC LightRecycle collection sites accepted residential-use fluorescent lamps only. After July 1, 2012 all lamp technologies were included as program materials, with expansion to ICI generators beginning October 1, 2012 (Table 9).

Table 8– BC LightRecycle Program Product Collection Timeline

January 1 – June 30	Residential-use fluorescent lamps (CFLs and fluorescent tubes)
July 1 – September 30	Residential-use lamps (all technologies) and residential-use fixtures
October 1 – December 31	Residential, institutional, commercial and industrial end-of-life lamps, ballasts and fixtures

In 2012, the BC LightRecycle program collected an estimated 1,164,966 units of lamps, 67 tonnes of residential volume residential fixtures and 1,969 kilograms of PCB ballasts across the province (Table 9). While the estimated number of lamps collected was derived from information provided by the programs three lamps processors, the estimated tonnage of residential fixtures was derived based on sampling reports from the processors. The estimated weight of PCB Ballasts collected is based on information provided by the program's processor of PCB Ballasts.

Table 9 – Estimated Quantity of Products Collected in 2012

Product	Estimated Quantity Collected
Lamps	1,164,966 units
Residential Fixtures	67 tonnes
PCB Ballasts	1,969 kilograms

Note: The program did not process any crushed lamps in 2012

Commercial fixtures and non-PCB ballasts were collected and processed through the scrap metal recycling system (market driven system). As outlined in the program plan, sampling studies will be completed in 2013 to estimate the quantities of these products managed through the scrap metal system.

Table 10 presents a breakdown of the estimated number of units of each type of lamp collected by the program in 2012.

As outlined in the program plan, absolute collection rate targets for fixtures and ballasts will be developed after a baseline of 18 months of program operation have occurred (July 2012-December 2013). The program will file an amended program plan with the BC Ministry of Environment containing updated collection rate targets by April 1, 2014. The program will conduct public consultation events on these targets through the use of webinars.

The absolute collection quantity for the different lamp technologies noted below is estimated based on the three processors/recyclers reported quantities processed between January 1 and December 31, 2012. The quantities of units presented may include units collected by the program in the 2011 fiscal year but processed in the 2012 fiscal year by the processor as well as exclude units collected in the 2012 fiscal year that have not been processed as of 31 December 2012.

Between January 1 and June 30, 2012 only residential quantities of fluorescent tubes and CFLs processed were considered program materials, and quantities of incandescent lamps for example, were not included as these were considered non-program materials.

Table 10 – BC LightRecycle Program 2012 Absolute Collection Data: Lamps

Lamp Technology	Units Collected
0 to 2 foot fluorescent tubes including U and O shaped tubes	10,963
>2 to 4 foot fluorescent tubes including polycoated tubes	637,198
>4 to 8 foot fluorescent tubes	58,263
CFL Lamps	257,845
Incandescent Lamps	91,684
Halogen Lamps	22,056
LED, HID, Neon and UV Lamps	86,957
Total Units Collected	1,164,966

Note: Miniature Bulbs are categorized according to lamp technology

As the processors do not report based on Regional District, and the volume of pickups generated through the residential collection sites is prohibitive to manually sort the data, we estimated the number of units collected through the residential program by determining the number of boxes that were requested for pick up by the depots and multiplied by an average number of program units and then added to the commercial volumes. For the 4' and 8' long boxes, the average number of units per box were calculated for boxes processed by one of the programs recycler in 2012, and were found to be the same as 2011 values at 28 and 15 units/box respectively. Due to the increase in the number of program lamp technologies collected within the Bulb Boxes after July 1, the average program units in a bulb box increased from 85 to 105, from 2011 to 2012.

Table 11 – Estimated Units Collected by Regional Districts

Regional District	Estimate of Lamp Units by RD
Alberni Clayoquot	6,390
Bulkley Nechako	757
Capital Regional District	85,650
Cariboo	7,109
Central Coast	-
Central Kootenay	5,755
Central Okanagan	70,000
Columbia Shuswap	4,871
Comox Strathcona	15,459
Cowichan Valley	25,672
East Kootenay	9,180
Fraser Fort George	28,488
Fraser Valley	59,031
Metro Vancouver (GVRD)	789,886
Kitimat Stikine	4,103
Kootenay Boundary	5,081
Mt. Waddington	3,054
Nanaimo Regional District	64,763
North Okanagan	24,717
Northern Rockies	58
Okanagan Similkameen	11,702
Peace River	5,445
Powell River Regional District	3,345
Skeena-Queen Charlotte	1,876
Squamish Lillooet	4,538
Sunshine Coast	8,731
Thompson Nicola	20,788

Note: Estimated average number of units per box:
 Bulb box - 105, 4' box - 28, 8' box - 15

Units in Table 11 are estimated by applying the overall average volume per collection box in the residential system, to the number of boxes collected in each Regional District and adding the actual units as reported by the processor for volumes collected through the commercial collection system per Regional District. Due to the variability in the number of program units actually collected within a box, the total number of units by Regional District in Table 11 does not equate to the total number of units processed, and reported as collected. Table 11 was only intended to provide an indication of estimated volumes collected by Regional Districts.

7.3 Recovery Rates

A capture rate compares the quantity of products collected in a year to the quantity of products believed to be “available for collection” in that year. A capture rate model is considered more

appropriate than a recovery rate model (units collected/units sold in that year) for lamps given the long and increasing lifespans of these products and changing sales patterns of various lamps categories. Because of the durable nature of these products, each product unit sold should eventually be available for collection. 2012 capture rates and targets for two lamp types, fluorescent tubes and CFLs, are shown in Table 14 below.

The original program plan (Table 12) available to collect value was used for the first 9 months of 2012, until the collection of both residential and ICI volumes were accepted. For the last 3 months of 2012 the new program plan (Table 13) available to collect volumes were used, but divided by half as the program was fully operational for the ICI sector on October 1, not July 1 as originally anticipated.

Table 12 – Residential CFLs and Fluorescent Tubes Available to Collect and Targeted for Collection in 2012

2010 Program Plan	CFLs	Fluorescent Tubes
Available to Collect	487,800	364,200
Capture Rate	22 - 37%	22 - 37%

To calculate the available to collect rate for residential CFLs and fluorescent tubes between Jan – Sep, 2012 the total units available to collect for 2012, as listed in the 2010 program plan, were divided by 12 and multiplied by 9 for a total of 365,850 units of CFLs and 273,150 units of tubes available for collection.

Table 13 – Available to Collect and Targeted for Collection for All-Sector CFLs and Fluorescent Tubes in 2012

2012 Program Plan	CFLs	Fluorescent Tubes
Available to Collect – TOTAL	344,249	2,925,358
Capture Rate - Low Target	20%	10%
Targeted For Collection (Low)	68,850	292,536
Capture Rate - High Target	24%	12%
Targeted for Collection (High)	82,620	351,043

To calculate the available to collect rate for all-sector CFLs and fluorescent tubes between Oct – Dec, 2012, the total units available to collect for 2012, based on program operation for 6 months, as listed in the 2012 program plan, were divided by 2 for a total of 172,125 units of CFLs and 1,462,679 units of tubes available for collection.

The methodology used to determine the quantity of these lamp categories “available for collection” in 2012 is considered an estimate based on the best available data. This methodology is subject to change. If more accurate methodology or related data is developed that alters the estimated number of units available for collection in a given year, this information will be included in the program’s annual reports.

Table 14 – Capture Rates: Fluorescent Tubes and CFLs

	Units Available to Collect	Units Collected	Capture Rate Target	Actual Capture Rate
CFL Units	537,975	257,845	20-24%	48%
Fluorescent Tube Units	1,735,829	706,424	10-12%	41%

Capture rate targets were not set for the other lamp technologies for 2012, given the lack of comparable data on current recycling rates and sales patterns at the time the program plan was developed.

Comparable targets for these lamp categories will be developed after a baseline of 18 months of program operation has occurred (July 2012-December 2013) and will be based either on an absolute collection or capture rate model. The program will file an amended program plan with the BC Ministry of Environment containing updated capture targets for these categories by April 1, 2014. The program will conduct public consultation events on these targets through the use of webinars.

8. Summary of Revenues and Expenditures

The program is managed and funded by members based on fees applied to the sale of new program products in British Columbia (Table 15). In 2012 fees were subject to HST and may have been passed on by the members to their customers, either as visible fees or by incorporating the cost directly into the price of the product. On Oct. 1st, 2012, the program product fee schedule was adjusted to fund the expansion of the program and the additional product types captured. At this same time, the fee/unit on Fluorescent/Induction/UV Tubes measuring greater than 4 feet was increased from \$0.55/unit to \$0.80/unit to address a program deficit within Fee Category 3. All fees were used for program purposes and directly fund the collection, transportation and recycling of collected products.

Table 15 - Schedule of fee rates charged in 2012 for all program products

Product Category	Fee Category	Fee / Unit: Effective October 1, 2012	Fee / Unit (residential-use only): Effective Until September 30, 2012
Lamps	1. Fluorescent/Induction/UV Tubes measuring ≤ 2 feet	\$0.20	\$0.20
	2. Fluorescent/Induction/UV Tubes measuring > 2 feet and ≤ 4 feet	\$0.40	\$0.40
	3. Fluorescent/Induction/UV Tubes measuring > 4 feet	\$0.80	\$0.55
	4. Compact Fluorescent Lights (CFL)/ Screw-In Induction Lamps	\$0.15	\$0.15
	5. Light Emitting Diodes (LED)	\$0.15	n/a
	6. High Intensity Discharge (HID) and Other	\$1.10	
	7. Incandescent / Halogen	\$0.05	
	8. Miniature Bulb Package	\$0.10	
Fixtures	9. Designated Small Fixtures / Decorative Light Strings	\$0.15	
	10. Fixture Category A	\$0.85	
	11. Fixture Category B	\$1.40	
	12. Large Outdoor Fixtures	\$2.50	
Ballasts	13. Ballasts/Transformers (not integrated into lamps or fixtures)	\$1.00	

9. Plan Performance

Plan Target	2012 Results	Strategies for Improvement
For 2012, the program had a target to reach a minimum of 150 collection sites for residential volumes of lamps. The program exceeded this target.	201	N/A
For 2012, the program had a target to reach a minimum of 60 residential volume fixtures collection sites. The program exceeded this target.	112	N/A
For 2012, the program had a capture rate target of between 10-12% for fluorescent tubes. The program exceeded this target.	41%	N/A
For 2012, the program had a capture rate target of between 19-24% for CFLs. The program exceeded this target.	48%	N/A

The Life Cycle of a Residential-Use Light Bulb

Components are sold or used to make new products

Drop off your used bulbs at the nearest LightRecycle collection site

Bulbs are collected and transported to recycling facilities

Bulbs are processed and sorted into recyclable components

Benefits of Recycling Lighting Products

British Columbians are leaders in recycling, and can now participate in Canada's first comprehensive lighting products recycling program.

The LightRecycle program ensures that recyclable materials from lighting products, such as metal, plastic and glass, are recycled into new products and do not end up in landfills.

Some lighting products contain hazardous materials like mercury. LightRecycle helps keep these harmful materials out of the environment by safely recycling them at approved facilities.

About LightRecycle

LightRecycle is a non-profit program to recycle lighting products in British Columbia. Since 2010, LightRecycle has accepted residential-use fluorescent lights at collection sites across the province. The expanded LightRecycle program now accepts all lighting products for recycling without charge, including all types of lights (bulbs and tubes), ballasts and lighting fixtures used in residential, institutional, commercial and industrial applications.

LightRecycle was developed in response to the requirements of the BC Recycling Regulation. The LightRecycle program is managed by Product Care Association, a non-profit industry association.

Your Guide to Recycling...

For Consumers

There are more than 200 LightRecycle collection sites for consumers to drop off their burnt-out lights (bulbs and tubes) and over 80 collection sites for lighting fixtures across the province. Check before you go to find out which products the collection site accepts. There is no charge to drop off lighting products for recycling.

To find the collection site closest to you, please visit www.lightrecycle.ca

Accepted Lights

All types of residential-use lights and bulbs can be recycled, including:

- CFLs (compact fluorescent lights)
- Fluorescent tubes (up to eight feet in length)
- Halogen and Incandescent bulbs
- LEDs (light emitting diodes)

The maximum limit for returns in a single visit is a total of 16 fluorescent tubes and a total of 16 other bulb types.

Accepted Fixtures

Common examples of accepted lighting fixtures and products include:

- Floor and table lamps
- Ceiling and wall fixtures
- Outdoor fixtures
- Light strings (e.g. Christmas lights)
- Chandeliers
- Bicycle lights
- Flashlights

For a complete list of accepted fixtures, please visit www.lightrecycle.ca

For Large Volume Generators

Any large volume generator, including contractors, businesses, relampers, schools, hospitals and building managers, can now recycle lighting products used in institutional, commercial and industrial applications through LightRecycle without charge.

Light/Lamp Recycling

All types and quantities of lights/lamps can be recycled, ranging from fluorescent tubes to high intensity discharge (HID) lamps, without charge. Large volume generators are encouraged to consolidate a pallet or more of whole lights or a drum of crushed lights, in accordance with the program's packaging requirements, to qualify for a free pick-up service. The LightRecycle program also includes a growing network of over 40 collection sites that will accept less than a pallet of whole lights from large volume generators.

PCB-Containing Ballasts

Some lighting ballasts manufactured prior to July 1, 1980 contain polychlorinated biphenyls (PCBs) and require special handling. LightRecycle will pick-up PCB-containing lighting ballasts directly from large volume generators without charge. These products must be identified separately from ballasts that do not contain PCBs and should NOT be taken to LightRecycle collection sites.

Lighting Fixtures and Non-PCB Ballasts

Large volume generators can recycle their lighting fixtures and ballasts that do not contain PCBs through the existing scrap metal recycling system. A list of collection sites that accept these products is available for those requiring additional assistance.

For a complete list of collection sites, information on pick-up services and how to identify PCB-containing ballasts, please visit www.lightrecycle.ca

Program Funding

The LightRecycle program is funded by recycling fees applied to the sale of new lighting products in BC. As of October 1, 2012, fees apply to the sale or supply of all lights/lamps, ballasts and fixtures including retail, industrial, commercial and institutional sales. The fee rates vary by product type. The recycling fees are used to cover program costs, including managing the collection, transportation and recycling system for returned products. Manufacturers, retailers and wholesalers may include the recycling fee in the product price or display it as a separate charge to purchasers.

Product	Recycling Fee / Unit
Lights/Lamps	
Flourescent Tubes	
Measuring ≤ 2 feet	\$0.20
Measuring > 2 feet and ≤ 4 feet	\$0.40
Measuring > 4 feet	\$0.80
Compact Fluorescent Lights (CFL)	\$0.15
Light Emitting Diodes (LED)	\$0.15
High Intensity Discharge (HID) and Other	\$1.10
Incandescent / Halogen	\$0.05
Miniature Bulb Package	\$0.10
Fixtures	
Designated Small Fixtures / Decorative Light Strings (e.g., flashlights, holiday lights)	\$0.15
Category A (e.g. table lamps, chandeliers)	\$0.85
Category B (e.g. high bay)	\$1.40
Large Outdoor Fixtures (e.g. flood lights, street lights)	\$2.50
Ballasts	
Ballasts/Transformers (not integrated into lamps or fixtures)	\$1.00

Appendix B – Collection Sites – Broken-down by Regional District

In 2012, the BC LightRecycle program held operating contracts with 380 collection facilities across the province.

All unadvertised collection sites are listed as “Unadvertised” under the Collection Site Name column. Please note that one location is both an *Advertised Residential Fixtures* collection site as well as an *Unadvertised Commercial Lamps Consolidator*. To maintain confidentiality, the location has been listed here as an Advertised Residential Fixtures collection site only.

INDEPENDENT AUDITORS' REPORT

To: BC Ministry of Environment,

As required the British Columbia Environmental Management Act, Recycling Regulation 8(2)(f)(ii), we have audited the statement of revenues and expenses of the BC LightRecycle Program (the "Statement") as reported by Product Care Association for the year ended 31 December 2012 and a summary of significant accounting policies and other explanatory information.

Management's Responsibility for the Statement

Management is responsible for the preparation of the Statement in accordance with Canadian accounting standards for not-for-profit organizations, and for such internal control as management determines is necessary to enable the preparation of the Statement that is free from material misstatement, whether due to fraud or error.

Auditors' Responsibility

Our responsibility is to express an opinion on the Statement based on our audit. We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the Statement is free from material misstatement.

An audit involves performing procedures to obtain audit evidence about the amounts and disclosures in the Statement. The procedures selected depend on the auditors' judgment, including the assessment of the risks of material misstatement of the Statement, whether due to fraud or error. In making those risk assessments, the auditor considers internal control relevant to the entity's preparation of the Statement in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control. An audit also includes evaluating the appropriateness of accounting policies used and the reasonableness of accounting estimates made by management, as well as evaluating the overall presentation of the Statement.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

ROLFE, BENSON LLP

CHARTERED ACCOUNTANTS

INDEPENDENT AUDITORS' REPORT - continued

Opinion

In our opinion, the Statement presents fairly, in all material respects, the revenues and expenses of the BC Light Recycle Program as reported by Product Care Association for the year ended 31 December 2012 in accordance with Canadian accounting standards for not-for-profit organizations.

Restriction on Distribution

This report is prepared on the direction of Product Care Association's management and the requirements of British Columbia Environmental Management Act, Recycling Regulation 8(2)(f)(ii). As a result, the report may not be suitable for another purpose. Our report is intended solely for Product Care Association's management and the BC Ministry of Environment and should not be distributed to other parties.

**PRODUCT CARE ASSOCIATION -
BC LIGHT RECYCLE PROGRAM**

**Statement of Revenues and Expenses
For the year ended 31 December 2012**

	2012
Revenues	\$ 2,577,322
Program expenses	
Processing	533,066
Transportation	172,515
Depot supplies	124,800
Collection	91,007
Program expansion	38,618
	<u>960,006</u>
General and administrative expenses	
Communications	137,991
Administrative	44,820
Accounting and legal	4,366
Overhead allocation (Note 2(c))	147,611
	<u>334,788</u>
Total expenses	<u>1,294,794</u>
Excess of revenues over expenses for the year	\$ 1,282,528

The accompanying notes are an integral part of this statement.

**PRODUCT CARE ASSOCIATION -
BC LIGHT RECYCLE PROGRAM**
Notes to the Statement of Revenues and Expenses
For the year ended 31 December 2012

1. Basis of Presentation

This Statement includes the revenues and expenses of the BC Light Recycle Program, a segment of the operations of Product Care Association (the "Association").

2. Summary of Significant Accounting Policies

This statement of revenues and expenses is prepared in accordance with Canadian accounting standards for not-for-profit organizations. The significant policies are detailed as follows:

(a) Revenue Recognition

Revenue from eco-fees is recognized at the time an eco-fee applicable product is sold by a member of the Association, and the eco-fee becomes due and payable.

(b) Use of Estimates

The preparation of financial statements in conformity with Canadian accounting standards for not-for-profit organizations requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the balance sheet date and the reported amounts of revenues and expenses during the year. Actual results could differ from those estimates.

(c) General and Administrative Expenses

A portion of the total general and administrative expenses of Product Care Association, net of expense recoveries, has been allocated to this program. The allocation of general and administrative expenses to this program is determined using the percentage of program specific operating expenses as compared to total operating expenses for all Product Care Association programs.

INDEPENDENT AUDITOR'S REPORT

To the British Columbia Ministry of Environment:

We have audited the following Sections within Product Care Association's Annual Report for the BC LightRecycle Program for the year ended 31 December 2012 (together the "Subject Matter"):

- Table 4 and Appendix B - *Collection facilities;*
- Table 7 and Table 10 - *Product sold and collected; and*
- *Description of performance for the year in relation to targets 1 and 2 on page 17 of the Annual Report.*

The objective of this Report is to disclose how the Association's management has discharged its responsibility to report on the Subject Matter in accordance with Sections 8(2)(b), and (e) of the Recycling Regulation.

The Subject Matter is the responsibility of the Association's management who have prepared the Subject Matter in accordance with the evaluation criteria which are an integral part of the Subject Matter. Our responsibility is to express an opinion on this Subject Matter based on our audit. Our audit does not constitute a legal determination on the Association's compliance with the Recycling Regulation.

EVALUATION CRITERIA

The suitability of the evaluation criteria is the responsibility of management. The evaluation criteria presented in Attachment 1 are an integral part of the Subject Matter and address the relevance, completeness, reliability, neutrality and understandability of the Subject Matter.

SCOPE OF THE AUDIT

We carried out our audit in accordance with the International Standard on Assurance Engagements 3000 (ISAE 3000) published by the International Federation of Accountants. This Standard requires, amongst others, that the assurance team possesses the specific knowledge, skills and professional competencies needed to understand and audit the information included within the Subject Matter, and that they comply with specific requirements to ensure their independence.

An audit includes examining, on a test basis, evidence supporting the amounts and disclosures within the Subject Matter. An audit also includes assessing the evaluation criteria used and significant estimates made by management, as well as evaluating the overall presentation of the Subject Matter. The main elements of our work were:

- confirming the existence of collection facilities and their understanding of the program by reviewing contracts, performing site visits, telephone contact with the facilities and internet research;
- comparing the number of collection facilities to the prior year and investigating the reasons for any changes;
- checking the units of product sold during the year and agreeing to the audit work performed in relation to the Association's audited financial statements;
- checking the units of product collected during the year by agreeing to supporting shipping documentation on a test basis;
- re-performing conversion calculations on a test basis; and
- ensuring wording of annual report is reflective of audit findings.

OPINION

In our opinion, the Subject Matter within Product Care Association's Annual Report for the BC LightRecycle Program for the year ended 31 December 2012 presents fairly in accordance with the evaluation criteria, in all material respects:

- the location of collection facilities, and any changes in the number and location of collection facilities from the previous report in accordance with Section 8(2)(b) of the Recycling Regulation;
- the description of how total amounts of the producer's product sold and collected has been calculated in accordance with Section 8(2)(e) of the Recycling Regulation; and
- the description of performance for the year in relation to targets in the approved stewardship plan under Section 8(2)(b) and (e) of the Recycling Regulation.

Our report has been prepared solely for the purposes of management's stewardship under the Recycling Regulation and is not intended to be and should not be used for any other purpose. Our duties in relation to this report are owed solely to the Association, and accordingly, we do not accept any responsibility for loss occasioned to any other party acting or refraining from acting based on this report.

Rolfe Benson LLP
CHARTERED ACCOUNTANTS

Vancouver, Canada
27 June 2013

Appendix 1

EVALUATION CRITERIA

The following evaluation criteria were applied to the assessment of the location of collection facilities, and any changes in the number and location of collection facilities from the previous report in accordance with Section 8(2)(b) of the Recycling Regulation:

- The Association maintains a listing of all collection facilities for the program, including the location of the collection facility, the total of which agrees to the number of collection facilities as disclosed in the annual report.
- Collection facilities have a signed contract with the Association, a physical location that is available to collect program materials, and the staff of the facility has an adequate understanding of the program.
- Reasons for any changes in the number of collection facilities from the previous annual report are supported by valid business purposes and adequately disclosed in the annual report.
- The definition of a collection facility as disclosed in the annual report is accurate.

The following evaluation criteria were applied to the assessment of the description of how total amounts of the producer's product sold and collected has been calculated in accordance with Section 8(2)(e) of the Recycling Regulation:

- The Association maintains a listing of product sold by product category for the fiscal year which agrees to the amounts disclosed in the annual report.
- The units of product sold per program category have been recalculated using the data included in the audit work performed in relation to the Association's audited financial statements.
- The Association maintains a listing of product collected by product category for the fiscal year which agrees to the amounts disclosed in the annual report.
- Each shipment of product collected is supported by documentation indicating the total units collected and the type of program materials collected which has been agreed upon by the shipper, receiver and carrier.

The following evaluation criteria were applied to the assessment of the description of performance for the year in relation to targets in the approved stewardship plan under Section 8(2)(b) and (e) of the Recycling Regulation:

- All stewardship plan targets relating to Section 8(2)(b) and (e) of the Recycling Regulation have been identified and disclosed in the annual report.
- The expected outcomes and target dates as included in the annual report are consistent with the targets in the approved stewardship plan.
- The facts disclosed in the annual update on progress are supportable by evidence, neutral and understandable.
