	APPENDIX 6 – Independent Audit of Program Performance	20

1.0 About Product Care

Product Care is a federally incorporated, not-for-profit product stewardship association formed in response to stewardship regulations and is governed by a multi-sector industry board of directors. Product Care has managed paint and other household hazardous waste industry stewardship programs since 1994.

Product Care's members are the "producers" (manufacturers, distributors and retailers) obligated by the Regulation under the category of architectural paint.

Product Care has filed a paint stewardship program plan with Recycle NB under the *Designated Materials Regulation* (the "Regulation") of the- *Clean Environment Act*. In this report, references from the regulation to the annual report requirements are indicated as follows:

45(1) A brand owner shall, on or before April 30 in each year, provide the Board with an annual report detailing the effectiveness of the paint stewardship plan during the previous calendar year including, but not limited to, the following:

1.1 Report Period

This report covers the calendar year 2012. The program began in April, 2009. Except as noted, the information in this report relates to the operating period January 1, 2012 to December 31, 2012.

1.2 Program Summary

The New Brunswick Paint Recycling Program offers collection sites throughout the province to which consumers can bring leftover household paint. The collection sites include retailers, Solid Waste Commissions (including events) and Redemption Centres (bottle return depots). The program supplies collection sites with standard reusable collection bins and other containers such as drums. The filled bins are then collected from the collection sites by a hauler contracted to the program, and empty bins are dropped off. The filled bins are then consolidated at the hauler's warehouse into full loads which are shipped to processors for recycling. Additional elements of the program managed by Product Care Association include revenue management, communications and administration.

1.3 Brand Owner Information

45 (2) *At the same time a brand owner submits its annual report, it shall provide the Board a statement in writing as to the total amount of paint sold by it during the previous calendar year.*

As of December 31, 2012, the Program had 55 paint brand owners (listed in Appendix 1). During the 2012 calendar year, 7 new program members were added: NLS Products, BASF Canada, Denalt Paint, Michael's Stores, Swing Paint, Timber Pro Coatings, and XIM Products. Liquidation World changed their name to Big Lots Canada.

Program members reported the sale of 2,023,822 containers of program products in New Brunswick from January 1, 2012 to December 31, 2012, for an estimated liquid volume sold of 5,212,841 litres.

1.4 Total amount of waste paint collected

- (a) *the total amount of waste paint collected in New Brunswick by the brand owner;*
 (b) *the total amount of waste paint processed or in storage;*

Table 1 below shows the total amount of waste paint collected by the program for the reporting period, the volume of waste paint shipped to processors and the volume processed by collection container (tubskids and drums) and by residual volume (litres). Volumes collected but not shipped or shipped but not processed were managed in the following program year. Table 2 shows the total amount of paint tubskids and aerosols collected by regions as defined by RNB.

Table 1: Total Amount of Waste Paint Collected during the 2012 Reporting Period.

Item	Number of Tubskids ¹	Residual Paint Volume (L)	Number of Aerosol Drums ³	Residual Aerosol Paint Volume (L) ⁴	Total Residual Paint Volume (L)
Volume Collected	1683	288,803 ⁽²⁾	76	399	289,202
Volume Shipped to Processor	1711	293,608 ⁽²⁾	66	347	293,955
Volume Processed	1882	323,002	34	179	323,181

- (1) Tubskid dimensions (42" x 34" x 48") with a nominal capacity of 126 one gallon containers. The actual number of paint containers per bin varies depending on the mix of paint container sizes, ranging from 250ml – 18.9L capacity.
- (2) Conversion rate 171.6 L per collection bin. Reuse volume is not included in calculation. This rate is based on the number of tubskids processed and the total residual volume of material generated.
- (3) Each drum holds approximately 175 aerosol containers
- (4) Conversion rate 5.25 Ls per drum

Table 2: Paint tubskids and aerosol drums collected by region.

REGION	Paint (Tubs)	Aerosols (Drums)	Total
	SWC/Retailer/ Redemption Centre	SWC/Retailer/ Redemption Centre	
Cogedes	62	1	63
Cogerno	68	8	76
Fredericton	331	2	333
Fundy*	327	9	336
Kent	27	0	27
Kings County	39	2	41
Nepisiquit-Chaleur	107	0	107
Northumberland	89	2	91
Restigouche	64	0	64
South West	49	2	51
St John*	0	0	0
Valley	34	1	35
Westmorland-Albert	486	49	535
TOTAL	1683	76	1759

*Beginning April 2012, St John and Fundy region collections were merged.

In 2012, a total of 1,711 tubskids of leftover paint were delivered to the Laurentide Re-sources Atlantic Inc. facility in Springhill, NS for processing; this amount includes tubskids left over at Hebert's Recycling from 2011.

During the reporting period, Laurentide processed 1,904 tubskids (opened, sorted and bulked into shipping containers), including additional tubskids that were in their inventory from 2011. In total, 236,871 paint cans were processed in 2012.

2.0 Processing

(c) *the percentage of waste paint collected that was reused, recycled, disposed of in an engineered landfill, recovered for energy, contained, or otherwise treated or disposed of;*

Table 4 shows the breakdown (in percentages) of waste paint collected that was reused, recycled, disposed of in an engineered landfill, recovered for energy, contained, or otherwise treated or disposed of. In addition, approximately 75 tonnes of empty metal paint containers were generated and sent for metal recycling with Tri Province Enterprises in Moncton, NB, who sent them to Quebec Milling for smelting. Approximately 3.4 tonnes of plastics 5 gallon pails (HDPE) and approximately 2.9 tonnes of plastic paint cans (polypropylene) were sent to Gaudreau Environmental for plastics recycling. Table 3 below summarizes this information.

Table 3: Metal and Plastic Containers Collected and Recycled in 2012.

Container Type	Collected and Recycled (tonnes)	Processor
Metal	75.4	Quebec Milling, QC
Plastic pails (HDPE 2)	3.4	Gaudreau Environmental, Victoriaville, QC
Plastic paint cans (polypropylene)	2.9	Gaudreau Environmental, Victoriaville, QC

Table 4: Percentage of Waste Paint by Disposal Method.

Method	Volume (litres)	Percentage
Reuse	1,229	0.4%
Recycle	233,653	72.0%
Landfill	34,645	10.7%
Energy Recovery	54,883	16.9%
Total	324,410	100%

The following section describes the processing methods referred to in the table above.

(d) *a description of the types of processes utilized to reuse, recycle, dispose of in an engineered landfill, recover energy from, contain, or otherwise treat or dispose of, waste paint;*

2.1 Reuse

Through the Paint Exchange Program, better quality paint returned to collections sites are made available for the public to take, free of charge, and use. Paint Exchange was offered at 28 collection sites, an increase of 1 site over last year. Paint Exchange was offered at 45% of collection sites. An estimated 1,229 litres of paint was given away at no charge through the Paint Exchange program to consumers, a slight decrease over last year (1,244 litres). Reuse volumes are estimated by assuming that each container is on average 75% full.

2.2 Recycling

At the Laurentide Re-sources facility, paint containers are removed from the collection bins, inspected, opened, sorted by type, colour and quality, and poured into shipping containers. The bulked paint of recyclable quality is then transferred to an affiliated processor, Peintures Recuperees du Quebec (PRQ) in Victoriaville, QC. Table 5 illustrates the quantity of latex paint and of alkyd paint that was recycled. Due to a diminishing market for alkyd paint, it has become an increasing challenge to recycle alkyd paint. During the reporting period, Product Care was notified by Laurentide Re-sources, that they were no longer able to recycle all alkyd paint and that they need to use energy recovery as the management option. Product Care requested approval from Recycle New Brunswick for the change of management option and approval was granted. Limited alkyd paints continue to be recycled.

Table 5: Quantity and Type of Paint Recycled.

Type	Litres	Percentage
Latex paint	192,047	82.2%
Alkyd paint	41,606	17.8%
Total	233,653	100 %

2.3 Landfill

The sorting and bulking of the latex paint by Laurentide Re-sources generated 34,645 litres of non-recyclable latex sludge/solid which were solidified and disposed of at a synthetic-lined landfill cell with leachate collection.

2.4 Energy Recovery

Not all collected oil based paint is of suitable quality for paint recycling. In some cases the paint may be contaminated, not in liquid form, wrong colour or of the wrong chemistry for paint recycling. In addition, regulations such as the Federal VOC Regulations, required tighter limits on certain chemical constituents, which tend to be higher in older paints, making it difficult to recycle oil based paint back into paint. The market for the recycled oil based paint is significantly smaller than that for the water based products and continues to diminish as water base technology replaces oil based technology.

Due to the high solvent content of oil based paints; oil based paints are suitable for energy recovery. Through the process of fuel blending, some of the oil based paint collected by the program that is not suitable for paint recycling, is used as an alternative energy source in applications such as permitted incinerators. During the reporting period 54,883 litres of alkyd paint and paint from paint aerosols were blended with other fuels and utilized for energy value at licensed facilities.

2.5 Incineration

During the reporting period, no material went for incineration.

2.6 Design for Environment

(e) *a description of efforts to redesign paint products to improve reusability and recyclability;*

The manufacturing of paint continues to shift from oil based paints to water based paints due to a number of factors including:

- Consumer preference for more environmentally friendly products
- Advanced water base coating technology providing similar product performance as oil based technology
- Regulatory influences such as Environment Canada's Volatile Organic Compound (VOC) Concentration Limits for Architectural Coatings Regulations (P.C. 2009-1535) which sets limits for VOC for a number of coatings including architectural coatings. These new regulations require coatings manufacturers to switch to low-VOC formulations

In addition, the program utilizes the follow tools to increase the amount of reuse and minimize the environmental impact:

- Variable eco fees which increase with the size of the container.
- Operation of the paint exchange program whereby leftover paint is made available to the public free of charge.

2.7 Depot listings

(f) *the location of return depots;*

As of December 31, 2012, a total of 62 collection sites participated in the program, an increase of 6 collection sites as compared to 2011. See Table 6 for the breakdown of the collection site changes. Appendix 2 contains a provincial map of the depot locations.

Table 6: 2012 NB Paint Collection Site Changes.

2011	Total # Collection Sites	56
2012	# New Collection Sites	8
2012	# Collection Sites Closed	2
2012	Total # of Collection Sites	62

Table 7 provides details on the depots, including location and participation in the paint exchange program.

Table 7: 2012 NB Paint Program Collection Site Details.

Depot Name	City	Paint Exchange	Depot Name	City	Paint Exchange

Northumberland Co-op Ltd.	Miramichi	No	Wheaton's All in One	Sackville	Yes

In addition to the depots listed in Table 7, there are two fire departments that accept paint products for the paint recycling program, but are not advertised as official depots:

- Saint Francois de Madawaska Fire Department; and
- Edmundston Fire Department

Materials collected at these two locations are delivered to the Cogerno SWC facility in Riviere-Verte which is a collection site under the program.

Solid Waste Commission events: According to information available to Product Care, 61 HHW collection events were operated by Solid Waste Commissions in 2012. All waste paint collected at these events was managed by the program.

Table 8: 2012 NB HHW Event Locations and Dates

3.0 Processing and Containment Facilities

(g) the location of any processing or containment facilities for waste paint;

Hebert's Recycling Inc.

53 Walsh Avenue
Miramichi, NB E1N 3A5

Laurentide Re-sources Atlantic Inc.

100 Main Street
Springhill, NS B0M 1X0

Société Laurentide Inc.

345 Bulstrode Street
Victoriaville, QC G6T 1P7

Clean Harbors Environmental Services

Rang 5 East 400 Galipeau Street
Thurso, QC J0X 3B0

4.0 Communication and Education Program

(h) the types of consumer information, educational materials and strategies adopted by the brand owner;

Product Care implemented a communication and education program to educate consumers in accordance with the Regulation. The following sections describe the communication and education programs in detail.

4.1 Social Media Ads

Between September and October 2012, Facebook ads in English and French were placed. The ads garnered 73,961 impressions and generated 196 clicks.

4.2 Website

The Product Care website included New Brunswick Paint Program pages in English and French including:

- Depot finder (a map showing the locations of the collection sites)
- Depot hours and operations
- Information for trade painters (list of collection sites that can accept high volumes);
- Program product lists
- Other information (such as a description of the paint exchange program).

An estimated 4,500 unique visitors utilized the website during the 2012 calendar year. Additionally, the Product Care website was linked to (and from) the Recycle New Brunswick website.

4.3 Point of Sale and Point of Return Material

More than 10,000 pieces of promotional materials were replenished upon request in 2012 that included:

- Updated rack cards to include language on environmental protection and economic benefits
- Updated posters to include language on environmental protection and economic benefits
- Collection site tri-fold brochures identifying products accepted/not accepted
- Paint can stickers
- “Your nearest collection site” posters
- FAQ sheet for retailers

4.4 Program Hotline

Recycle NB operated a bilingual “hotline” to respond to consumer enquiries about paint and other products.

4.5 Solid Waste Commissions

New Brunswick's 12 Solid Waste Commissions were contacted to identify methods for collaboration:

- Fundy SWC published 59,000 municipal calendars in November 2012 that include information about the program (Appendix 3)
- Valley Waste SWC sponsored a paint recycling ad featuring the closest depot information and the Product Care website (Appendix 4)

4.6 Yellow Pages Ads

- Print ads in English and French were placed in Saint John Yellow Page book in August and Fredericton book in December (Appendix 5)
- Online ads in English and French were placed July on Yellow Pages website www.yellowpages.ca
- Print ads initially planned for Bathurst, Miramichi, and Moncton were cancelled to avoid overlapping paint recycling ads placed by RNB

4.7 Retailer Obligation to Post Program Promotional Material

- Retailers were sent email reminders June and August of their legal obligation to post promotional material (posters, rack cards) at the point of sale
- Requested posters and brochures were mailed upon request

4.8 Depot Visits

- The following 11 collection depots were visited in 2012, with the intent to deliver informational brochures, provide any necessary support and to follow up on previous calls or visits. The depots were all trained about what is acceptable and what is not acceptable in the program:

Depot	Town
Roblyn Home Hardware	Oromocto
Brook's Collection Depot	Hartfield
Gorbers Collection	Moncton
Horseman's Collection Depot	Salsbury
Shediac Redemption Centre	Shediac
Crain's Bottle Exchange	Bath
Vail's Bottle Exchange	Woodstock
Bett's Home Hardware	Doaktown
Topmar Building Supplies	Fredericton
Norrad's Redemption Centre	Sussex
Norrad's Redemption Centre	Quispamsis

4.9 Waste Reduction Week

- In addition to the above communication initiatives by the program, RNB also promoted the paint program during Waste Reduction Week October 15-21, 2012. Promotional activities included:
 - Radio ads on CJCJ-EZ, Woodstock, CKNB Radio, Campbellton, CJCW Sussex and CKRO Caraquet between Oct 18-21, 2012
 - Newspaper ads ran in the Bugle Observer, Kings County Record, L'Etoile Peninsula, The Campbellton Tribune, and L'Etoile Restigouche week during Waste Reduction Week
 - Direct mail-outs were sent to all households in Woodstock, Hartland, Sussex, Campbellton, and Caraquet
 - A website banner ad was developed to highlight the paint program
- During Environment Week (June 3-9th 2012), radio ads were run in the Bugle Observer, Kings County Record and Campbellton Tribune. Radio ads ran on the Woodstock, Campbellton, Sussex and Caraquet stations.

5.0 Financial Information

(i) the annual financial statements, as prepared by an independent auditor, of the revenues received and the expenditures incurred by the paint stewardship plan;

Product Care's audited financial statements are included.

6.0 Audit of NB Paint Stewardship Program

(j) an assessment of the performance of the brand owner's plan prepared by an independent auditor; and

A report prepared by an independent auditor as to the program performance is attached in Appendix 6.

(k) any other information requested by the Board that relates to the paint stewardship program.

No other information is submitted.

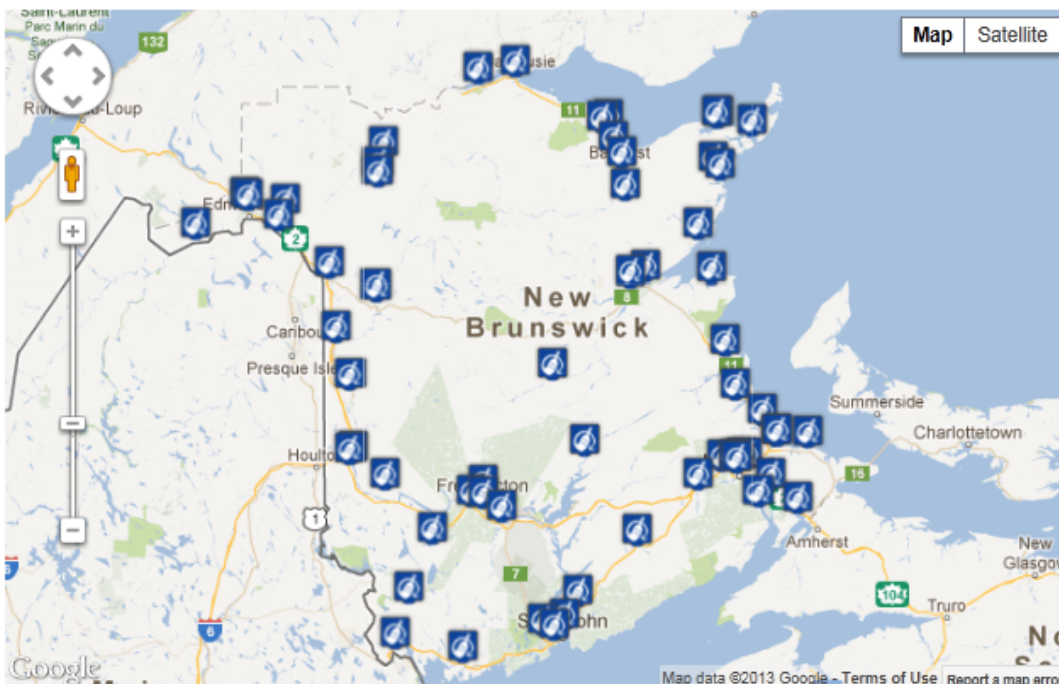

APPENDIX 1 – List of Program Brand Owners as of December 31, 2012

- 1439174 Ontario Ltd (NLS Products)
- 7594828 Canada Inc. (TruServ Canada)
- Akzo Nobel Canada Inc.
- Alexandria Moulding
